## TEST REPORT

No. NA69060450

Applicant: Daiken Corporation<br>Specimen: details in the report<br>Test item : antibacterial efficacy (Hospi-tone treatment efficacy)

Test result by the specimens submitted to the laboratories on June 20, 1997 is in the attached report.

Japan Food Research Laboratories, juridical foundation
July 16, 1997

## Antibacterial Efficacy Test

1. Applicant : Daiken Corporation
2. Specimens : (1) standard ceiling board sample
(2) antibacterial treatment ("Hospi-tone" coating) ceiling sample
(3) not specimen but in laboratory dish
3. Test purpose : antibacterial efficacy on antibacterial-treated ("Hospi-tone") specimen
4. Test procedure : put a few drops of bacteria on each specimen of (1) and (2), and in each laboratory dish for Escherichia coli, Pseudomonas aeruginosa and MRSA, preserve or culture these bacteria under $36 \pm 1^{\circ} \mathrm{C}$, relative humidity over $90 \%$ and measure bacterial count after 5 and 24 hours respectively
5. Test result : shown in Table 1

Table 1 test result of antibacterial efficacy

| bacteria | condition | specimen | viable bacteria count |
| :--- | :--- | :--- | :---: |
| Escherichia coli | immediate check | specimen (3) | $3.6 \times 10^{4}$ |
|  | after 5 hours | specimen (1) | $6.4 \times 10^{3}$ |
|  |  | specimen (2) | $4.6 \times 10^{3}$ |
|  | after 24 hours | specimen (3) | $7.3 \times 10^{4}$ |
|  |  | specimen (1) | $1.1 \times 10^{2}$ |
|  |  | specimen (2) | $<10$ |
| Pseudomonas (3) | $2.6 \times{ }^{6}$ |  |  |
| aeruginosa | immediate check | specimen (3) | $4.5 \times 10^{4}$ |
|  | after 5 hours | specimen (1) | $2.3 \times 10^{3}$ |
|  |  | specimen (2) | $4.3 \times 10^{2}$ |
|  |  | specimen (3) | $2.3 \times 10^{4}$ |
|  |  | specimen (1) | $7.8 \times 10^{6}$ |
|  |  | specimen (2) | 10 |
| MRSA 24 hours | specimen (3) | $2.2 \times 10^{6}$ |  |
|  | after 5 hours | specimen (3) | $3.8 \times 10^{4}$ |
|  | specimen (1) | $1.0 \times 10^{3}$ |  |

| specimen (2) | $7.0 \times 10^{2}$ |  |
| :---: | :---: | :---: |
| after 24 hours | specimen (3) | $2.3 \times 10^{4}$ |
|  | specimen (1) | 10 |
|  | specimen (2) | $<10$ |
|  | specimen (3) | $1.2 \times 10^{6}$ |

* <10 means no bacteria was found.

6. Test method
1) test strain

Escherichia coli IFO 3972
Pseudomonas aeruginosa IFO 13275
Staphylococcus aureus IID 1677 (MRSA)
2) test culture media

NA culture media : general agar-agar by Eiken Kagaku Co. made.
$1 / 200 \mathrm{NB}$ culture media: dilute by 200 times bouillon (soup stock) by Eiken Kagaku Co. added $0.2 \%$ meat extract and adjusted pH to $7.0 \pm 0.2$

SCDLP agar culture media: SCDLP agar culture media by Nihon Seiyaku Co. Made
3) adjustment of bacterial liquid
(1) Escherichia coli and Pseudomonas aeruginosa : culture test strain for 18~24 hours in NA cultural media at $35 \pm 1^{\circ} \mathrm{C}$ and equalize the distribution of the test strain to adjust the bacteria count $5.0 \times 10^{4} \sim 5.0 \times 10^{5}$ level per millilitre.
(2) MRSA : culture test strain for $18 \sim 24$ hours in $1 / 200 \mathrm{NB}$ culture media at $35 \pm 1^{\circ} \mathrm{C}$ and equalize the distribution of the test strain to adjust the bacteria count $5.0 \times 10^{4} \sim 5.0 \times 10^{5}$ level per millilitre
4) test specimen

Test specimen ( $5 \times 5 \mathrm{~cm}$ ) should be wiped lightly with absorbent cotton immersed in $99.5 \%$ ethanol and then irradiated ultraviolet and soaked one night in phosphate buffer solution.
5) specimen conditions
put 0.5ML (millilitre) of each bacteria liquid on each specimen ( 25 cm 2 ) and preserve or culture under $36 \pm 1^{\circ} \mathrm{C}$, relative humidity over $90 \%$, also prepared laboratory dishes for comparison
6) measure bacterial count
preserved living bacteria on each specimen for 5 or 24 hours and took out by phosphate buffer solution and measured the bacterial count by the method of flat-panel agar culture (cultured 2 days at $35^{\circ} \mathrm{C}$ ) using SCDLP agar and converted it into per specimen
as for immediate measure, use each bacterial without preservation taken out from laboratory dishes
